

FOR OCCUPATIONAL HEALTH & CORPORATE
SCREENING

Every site, every employer, *one record.*

A screening day is high volume, on the road, and split across employer sites. Results come off handhelds, chain of custody lives on paper, and every corporate client wants their own report. When an auditor asks who tested whom, and whether that tester was competent, the evidence is scattered across vans, laptops and folders.

Catenix captures the whole day onto one audited record: results attach themselves to the right person, operator competency proves itself, and each employer gets a report built from the same data, from arrival to sign-off.

THE ONE CONNECTED THREAD

01 CONNECT

Every handheld

A small on-site gateway captures results automatically over HL7, POCT1-A2 and ASTM. Protocol support across around 51 device families, on the bench or in the van.

02 RUN

The screening day

Register each attendee, attach results to the right person, keep chain of custody, and hold a review-and-sign gate before any report is released.

03 ASSURE

Competency, proven

Operator competency populates itself from device traffic, a lockout engine stops uncertified testing, and a tamper-evident audit trail records who did what.

04 SETTLE

Per employer

Per-corporate-client reporting, corporate billing, and exports in the format an auditor asks for: bill and report each employer from the same record.

Catenix does not interpret clinical results and provides no clinical decision support. Interpretation, validation and authorisation stay with your clinicians.

CATENIX.COM

One network, every site under *one roof*.

Site Overview		Aggregated
SITE	RESULTS (2021)	DEVICES OPERATORS
Meridian Health - Canary Wharf CW		0 active
Meridian Health - Harley Street MAIN		0 active
Meridian Health - Manchester MCR		0 active

Multi-site network view: every screening location, its devices and its activity on one overview, with per-site controls.

- Operator competency that self-populates**
 Operators are auto-discovered from device traffic where they transmit an ID, matched to certifications, with live expiry alerts and a "who can cover what today" matrix.
- Multi-site controls**
 Manage devices, operators and activity across every screening location from one network view, with per-site sign-off and its own audit trail.
- Exports auditors accept**
 Pull the evidence an assessor asks for in the format they want it, built from wired data rather than assembled by hand after the fact.
- Lockout keeps uncertified testing off**
 No cert, no QC, no test: the lockout engine stops a device when competency lapses or QC fails, so every result on the day was run by someone allowed to run it.
- Per-corporate-client reporting**
 Report per employer from the same audited record, in your identity, so each corporate client gets its own view without re-keying anything.
- Chain of custody, end to end**
 Every result carries who registered it, who ran it and who released it, held in a tamper-evident audit trail, with QC kept separate from attendee results.

OPTIONAL ADD-ONS FOR OCCUPATIONAL-HEALTH PROVIDERS

MULTI-SITE NETWORK

OPERATOR COMPETENCY

CORPORATE BILLING

PRECISION & METHOD VERIFICATION

DOC CONTROL & CAPA

AUDITOR EXPORTS

Operator competency auto-discovers only where a device transmits operator identity. Precision and method-verification studies are aligned with EP15/EP05/EP09 approaches and produce a print-ready validation report.

See Catenix run a screening day across your sites.

Bring your device list and one employer. We will show results landing on the record and the competency evidence building itself, live, in a 30-minute walkthrough.
