

FOR PRIVATE & SCREENING CLINICS

Run your diagnostic clinic in *one system*.

Point-of-care testing is fast at the bench. Then the result has to reach the systems your clinic runs on, and that is where the day slows down: values re-keyed by hand, quality control living in a spreadsheet, audit evidence scattered across folders.

Catenix connects every analyser to one audited record and runs the whole visit around it: registration, results, quality, reporting and billing, from booking to signed report.

THE ONE CONNECTED THREAD

01 CONNECT

Every analyser

A small on-site gateway captures results automatically over HL7, POCT1-A2 and ASTM. Protocol support across around 51 device families.

02 RUN

The whole visit

Self-registration, booking and payment, results attached to the right patient, a clinician review-and-sign gate, and a branded report.

03 ASSURE

Quality, proven

Automatic QC with Levey-Jennings and Westgard rules, a lockout engine, operator competency, and a tamper-evident audit trail.

04 SETTLE

The clinic loop

Screening packages, invoicing and payments, and a modular marketplace: enable and pay for only the add-ons you use.

0

VALUES RE-KEYED BETWEEN SYSTEMS ONCE CONNECTED

Days, not quarters

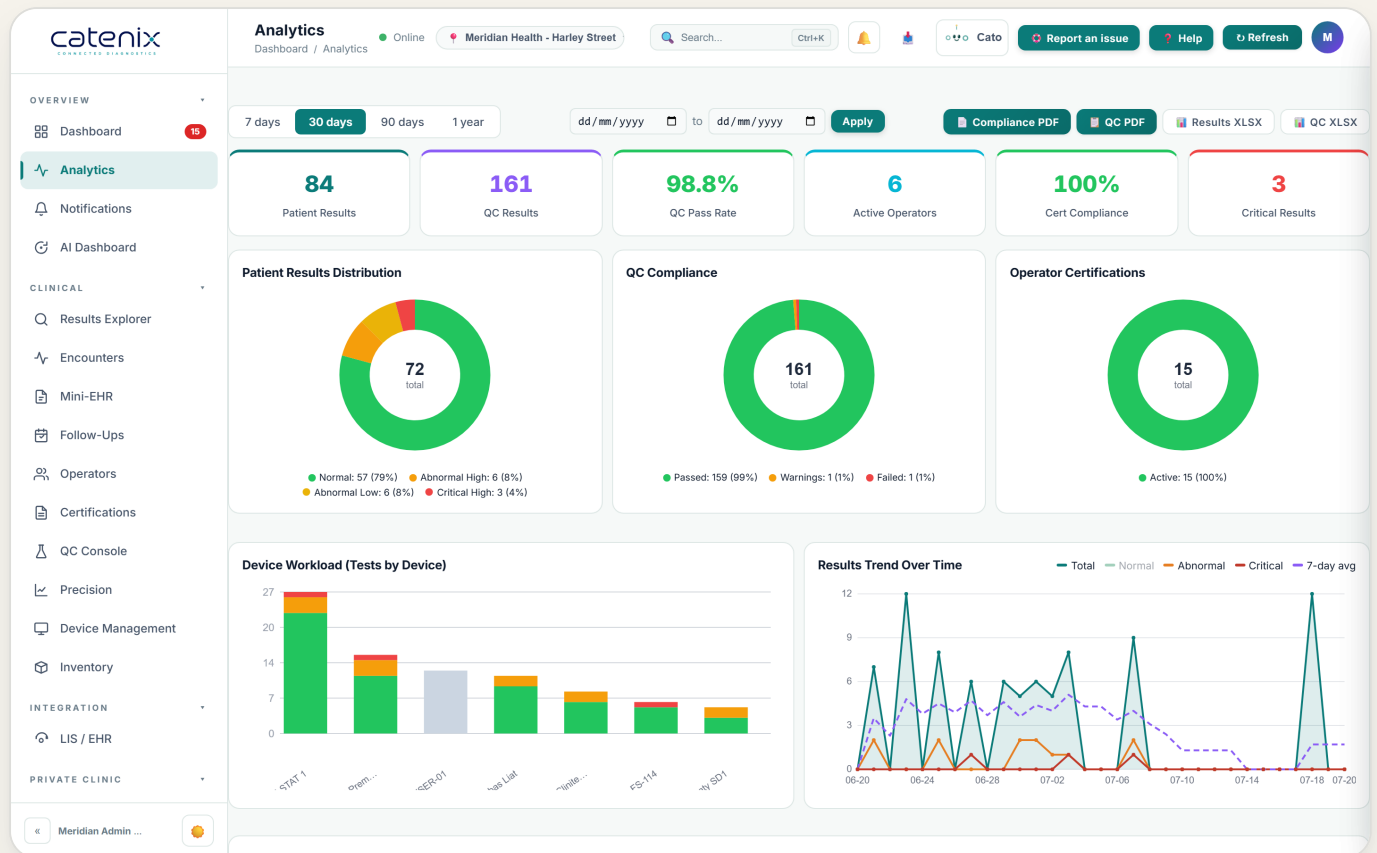

MOST SUPPORTED ANALYSERS CONNECT WITHIN DAYS

1 record

REGISTRATION TO RESULT TO SIGNED REPORT

Catenix does not interpret clinical results and provides no clinical decision support. Interpretation, validation and authorisation stay with your clinicians.

One platform, from the front desk to *the bench*.

Operational analytics: results, QC compliance, operator certification and turnaround time, without a spreadsheet.

● Patients register and pay themselves

A branded self-registration page handles details, package choice, booking and payment. Reception scans them in.

● A clinician signs before release

No report leaves the building until a clinician reviews and signs. Reports carry a tamper-evident completeness record.

● Branded reports and GP letters

Design the patient report and referral letter in your clinic identity, no developer required.

● Results land on the right visit

Captured results attach themselves to the encounter automatically. Anything uncertain is queued for a person, never guessed.

● QC evidence builds itself

Control runs are captured, kept separate from patients, and rule-checked. The evidence an assessor asks for already exists.

● A patient app, when you want it

Newly available: patients can book, check in, view results and message the clinic. Off by default, on when you are ready.

OPTIONAL ADD-ONS FOR WELLNESS & SCREENING CLINICS

CARDIOVASCULAR RISK SCORE

SMARTPHONE HEALTH-APP TRENDS

SECURE MESSAGING

DOC CONTROL & CAPA

PRECISION & METHOD VERIFICATION

MULTI-SITE NETWORK

A cardiovascular risk score is produced by a certified external engine and approved by your clinician: decision support, not diagnosis. Smartphone health-app data is opt-in and off by default.

See Catenix on your bench.

Bring your analyser list. We will show results landing in the record, live, in a 30-minute walkthrough.
